## M2 Internship - AI-based proactive scheduling for IoT data streams

*Le descriptif de l'offre ci-dessous est en Anglais*

**Type de contrat :** Convention de stage

**Niveau de diplôme exigé :** Bac + 4 ou équivalent

**Fonction :** Stagiaire de la recherche

### Contexte et atouts du poste

The MIMOVE team at Inria Paris undertakes research enabling next-generation distributed systems, from their conception and design to their runtime support, focusing on middleware and data. MIMOVE has longstanding expertise in mobile and service-oriented computing, semantic technologies, interoperability, system emergence and evolution, and edge/fog computing. We work on these topics through many national and international collaborations with academia and industry, including large-scale software development of real-world systems. MIMOVE's research results impact various application domains; we focus in particular on the application areas of IoT and smart cities.

The selected candidate will be supervised by Maroua Bahri ([maroua.bahri@lip6.fr](mailto:maroua.bahri@lip6.fr)) and Nikolaos Georgantas ([nikolaos.georgantas@inria.fr](mailto:nikolaos.georgantas@inria.fr)).

### Mission confiée

Data Stream Processing and Analytics (DSPA) applications are widely used to process unbounded data streams generated online at different rates from multiple geographically distributed data sources, such as mobile IoT devices, sensors, etc. These data streams require to be processed with low latency guarantees to extract valuable information in a timely manner via a series of continuous operators that constitute a DSPA application.

The edge-fog-cloud continuum deployment approach enables benefits from both lower network delays and balanced bandwidth usage and resources along the continuum. To this end, it requires deciding which part of the DSPA application to deploy on each of the layers in order to ensure the trade-off between the aforementioned advantages. Several deployment solutions have been proposed in the literature that statically identify (near) optimal deployment schemes of DSPA applications which are typically long-running with varying workloads conditions over time [1,2]. To keep consistent Quality of Service (QoS) levels (e.g., latency, energy, network constraints) in the face of such varying conditions, the static deployment scheme may no longer be sufficient. This requires a solution for triggering and calculating dynamically a new deployment scheme from the current deployed DSPA application in order to continuously ensure the required QoS levels [3,4]. Actually, dynamic deployment should be triggered at the right time: triggering it too late will violate the QoS requirements while triggering it too early will impose unnecessary load on the edge-fog-cloud resources and may result in a solution that diverges from the (near) optimal solution.

### Principales activités

The internship focuses on enhancing DSPA applications through predictive methods for proactive triggering and optimized scheduling mechanisms across the edge-fog-cloud continuum to maintain consistent QoS requirements. The proactive approaches will leverage AI-based methods over historical and real-time system and application metrics data to forecast operator and execution environment changes, enabling dynamic adaptation of operator scheduling [5].

Key objectives include: design of an intelligent triggering strategy to initiate dynamic redeployment, predictive scheduling for proactive adjustments to operator deployments, and validation of the proposed scheduling method to ensure QoS metrics. This work aims to ensure optimal resource usage and performance in highly dynamic environments while maintaining a balance between proactive adjustments and minimal disruption to operations.

## Compétences

- Master level research internship (M2) or equivalent (stage de fin d'études ingénieur).
- Sound knowledge of machine learning, distributed systems, and edge-fog-cloud computing.
- Software development skills: Python and Java.
- Good level of spoken and written English which is our working language. French is not required.

## Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

## Informations générales

- **Thème/Domaine** : Systèmes distribués et intergiciels  
Système & réseaux (BAP E)
- **Ville** : Paris
- **Centre Inria** : [Centre Inria de Paris](#)
- **Date de prise de fonction souhaitée** : 2025-03-01
- **Durée de contrat** : 6 mois
- **Date limite pour postuler** : 2025-02-16

## Contacts

- **Équipe Inria** : [MIMOVE](#)

## A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'efforce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

**Attention:** Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

## Consignes pour postuler

### Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

### Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux personnes en situation de handicap.
