

Offre n°2025-08645

Internship (M/F): force sensing for exoskeletons

Le descriptif de l'offre ci-dessous est en Anglais

Type de contrat : Convention de stage

Niveau de diplôme exigé : Bac + 4 ou équivalent

Fonction : Stagiaire de la recherche

Contexte et atouts du poste

Context and funding:

The position is funded by the PEPR O2R, a national French program to advance research in robotics which reunites several French laboratories in robotics, AI, and Social and Human Sciences.

In this context, the HUCEBOT team is involved in the projects AS3 and PI3, with the challenge to design AI-powered controllers for exoskeletons for improved assistance.

About the team:

The candidate will join the Human Centered Robotics team (HUCEBOT) in the Inria Center of the University of Lorraine in Nancy, France.

The team HUCEBOT develops control, learning, and interaction skills of human-centered robots, such as humanoid, mobile manipulators and exoskeletons. The team develops learning and control algorithms for teleoperated / supervised / autonomous robots, involved in complex manipulation tasks in man-made environments. It also develops prediction and control techniques for wearable exoskeletons designed to assist humans at work. The team has excellent robotics facilities, including several humanoid robots (Talos, iCub, G1), manipulators, drones, passive and active

exoskeletons, wearable sensors, force plates etc. Its laboratory has a 3D printing facility and a mechatronic workshop for prototyping and maintenance.

The team consists of many research scientists, postdocs, PhD and has the support of 1 software and 1 mechatronics engineer. The team is international - English and French speaking. French is not required, although free French classes are available in the institute for non-French speakers.

About the laboratory and Nancy:

The Inria Center of the University of Lorraine, is co-located with the Loria laboratory, in the Science and Technology Campus of the University of Lorraine (Nancy, France), next to the Botanical Gardens, at 20 minutes by public transportation or bike from the Nancy train station and City Center. Several student residences and facilities are at walking distance. Nancy is a University town, with a high quality of life and a vibrant student and expat community.

Mission confiée

This internship is about developing a sensing device to measure the 6D/3D contact forces exchanged between an exoskeleton and the human body. The measurement device should be small and easy to integrate on the exoskeletons of the team at the locations where the exoskeleton is attached to the human limbs.

The sensor will be mounted on one of the exoskeletons of the teams and tested in laboratory conditions. On the software side, the sensor will have to be visible on a ROS2 node.

The intern will be in charge of designing and fabricating the device and conducting validation experiments.

The internship is for a 3 to 6 months period (6 months ideally).

Principales activités

- Review state of the art in force sensing devices
- Design a sensing device for a wearable robot / exoskeleton
- Fabricate the device and mount it in one of the exoskeletons of the team
- Testing and validation
- Write software to read from the sensor
- Write hardware/software report
- Collaborate with the team to integrate the sensors in the current experiments and developments

Compétences

- Technical skills:
 - Very good programming skills.
 - Excellent skills with electronics / mechatronics, sensors fabrication.
 - Love working with real robots.
 - Signal processing
- Soft skills:
 - Excellent communication skills at work, and ability to report progress
 - Proactivity.
 - Not afraid of challenging projects.
 - Rigour and intellectual honesty
 - Curiosity and desire to learn
 - Practical mindset and ability to develop robust and reliable solutions
 - Autonomy and organizational skills
 - Love working in a multi-cultural environment
 - Team player

Avantages

- Subsidized meals
- Partial reimbursement of public transport costs
- Leave: 7 weeks of annual leave + 10 extra days off due to RTT (statutory reduction in working hours) + possibility of exceptional leave (sick children, moving home, etc.)
- Possibility of teleworking (after 6 months of employment) and flexible organization of working hours
- Professional equipment available (videoconferencing, loan of computer equipment, etc.)
- Social, cultural and sports events and activities
- Access to vocational training
- Social security coverage

Informations générales

- **Thème/Domaine :** Robotique et environnements intelligents
Ingénierie technique et de production (TIC) (BAP E)
- **Ville :** Villers lès Nancy
- **Centre Inria :** [Centre Inria de l'Université de Lorraine](#)
- **Date de prise de fonction souhaitée :** 2025-04-01
- **Durée de contrat :** 6 mois
- **Date limite pour postuler :** 2025-03-12

A propos d'Inria

Inria est l'institut national de recherche dédié aux sciences et technologies du numérique. Il emploie 2600 personnes. Ses 215 équipes-projets agiles, en général communes avec des partenaires académiques, impliquent plus de 3900 scientifiques pour relever les défis du numérique, souvent à l'interface d'autres disciplines. L'institut fait appel à de nombreux talents dans plus d'une quarantaine de métiers différents. 900 personnels d'appui à la recherche et à l'innovation contribuent à faire émerger et grandir des projets scientifiques ou entrepreneuriaux qui impactent le monde. Inria travaille avec de nombreuses entreprises et a accompagné la création de plus de 200 start-up. L'institut s'orce ainsi de répondre aux enjeux de la transformation numérique de la science, de la société et de l'économie.

L'essentiel pour réussir

- Bachelor or Master studies in Electronics, Computer Science or Mechatronics Engineering
- Excellent communication in English; French is a plus.

Attention: Les candidatures doivent être déposées en ligne sur le site Inria. Le traitement des candidatures adressées par d'autres canaux n'est pas garanti.

Consignes pour postuler

Sécurité défense :

Ce poste est susceptible d'être affecté dans une zone à régime restrictif (ZRR), telle que définie dans le décret n°2011-1425 relatif à la protection du potentiel scientifique et technique de la nation (PPST). L'autorisation d'accès à une zone est délivrée par le chef d'établissement, après avis ministériel favorable, tel que défini dans l'arrêté du 03 juillet 2012, relatif à la PPST. Un avis ministériel défavorable pour un poste affecté dans une ZRR aurait pour conséquence l'annulation du recrutement.

Politique de recrutement :

Dans le cadre de sa politique diversité, tous les postes Inria sont accessibles aux

personnes en situation de handicap.
